How Does it Work?

Below the counter is an induction warming system designed to hold food at temperatures ranging from 150-180 degrees fahrenheit. Magnetic technology heats the metal serving pieces, not the counter tops. Since the induction is discreet, you can use the counter however you want to. **Contact a Spring USA Sales Representative Today!**

Use the Induction Warmers For a Hot Buffet:

- Engineered Material Made From Granite & Quartz
- High Efficiency
- Low Energy Consumption
- Environmentally Friendly
- Flexible & Functional
- Easy to Clean
- **Choose Stationary OR Mobile Units**
- Customize Lengths Available

OR...you can

Use the Counter as a Regular Serving Station:

---

**Form & Function Combine!**
Form and function combine in the *SmartStone® Induction System* from Beneath engineered counter top material, made from granite and quartz, is a unique warming system.

Designed to hold food for buffet service, our magnetic technology enables diners to enjoy foods at perfectly maintained temperatures. With the versatility of the *SmartStone®* Induction unit, once an event is over, and the servers are removed, the countertop is available for a variety of other uses.

The secret is the practical application of highly efficient induction heating technology under a durable, environmentally effective countertop material. The induction system will only heat devices made for this purpose. Induction heat is a time-tested technology using a radio frequency that heats only ferrous metals. Because only the metal serving piece heats, the response is fast and 93% efficient. The results are spectacular!

The heat is managed by a uniquely sensitive thermocouple that monitors the temperature of the food serving piece. Temperatures are limited to four (4) pre-selected levels ~ 150, 160, 170 and 180 degrees fahrenheit. This protects the granite or glass material while maintaining the quality of the food items being served. The induction heating units require only 5.4 amps of 120 volt power, allowing installation of three (3) units with the use of a single 20 amp circuit.
